

Intents.json

This is a part of a JSON file called "intents.json" that contains information about various intents for a chatbot.

In this particular section, the intent is called "greeting" and it contains a list of patterns that a user might say to initiate a greeting. These patterns include phrases such as "Hi", "Hey", "How are you", "Is anyone there?", etc.

Additionally, the intent also includes a list of responses that the chatbot can use to reply to the user's greeting. For example, if the user says "Hello", the chatbot might respond with "Hey :-)", "Hello, thanks for visiting", "Hi there, what can I do for you?", or "Hi there, how can I help?" depending on which response is randomly chosen.
